

Decision curve analysis of the LUAD MPCDS

Clinical model versus clinical + continuous MPCDS; TCGA-LUAD development cohort

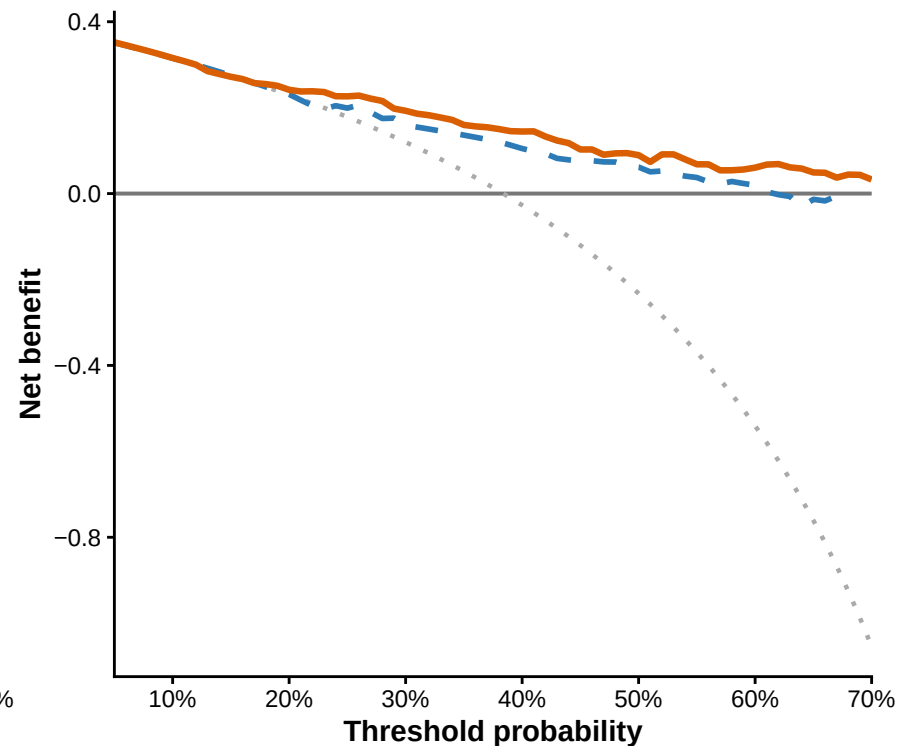

A. 1-year mortality

Apparent decision-curve analysis

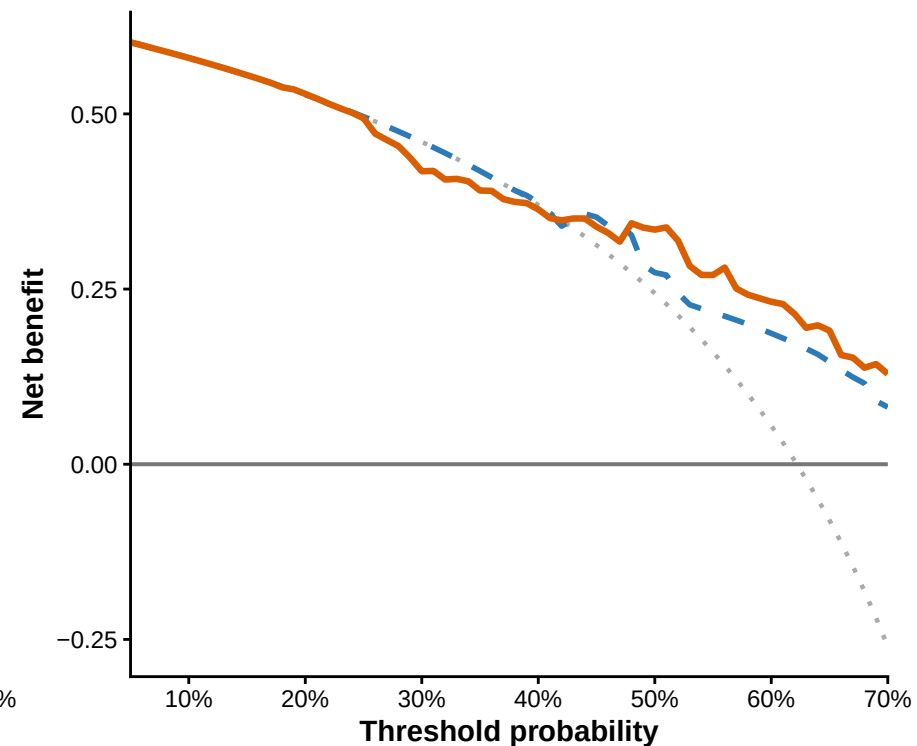

B. 3-year mortality

Apparent decision-curve analysis

C. 5-year mortality

Interpret cautiously because of heavier censoring

— Treat None ···· Treat All — Clinical — Clinical + MPCDS

Net benefit is shown across prespecified threshold probabilities. These are apparent development-cohort estimates and do not constitute external validation of clinical utility.
